DETAILED ACTION

Priority

1. This application appears to be a division of Application No. 09/583,530, filed 06/01/2000. A later application for a distinct or independent invention, carved out of a pending application and disclosing and claiming only subject matter disclosed in an earlier or parent application is known as a divisional application or "division." The divisional application should set forth only that portion of the earlier disclosure which is germane to the invention as claimed in the divisional application.

Specification

2. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

4. Claims 1-2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite in that it fails to point out what is included or excluded by the claim language. This claim is an omnibus type claim.

Regarding claim 1, it has been that the functional "if any" statement does not define any structure in the claim (e.g., step of etching the gate insulating layer, step of forming contact-slits, a piece of conductive material) and accordingly cannot serve to distinguish.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

6. Claims 1-2 are rejected under 35 U.S.C. 102(a) as being anticipated by Applicant's admitted prior art (APA), figures 1-3.

The above claims are anticipated by APA's figures 1-3 which disclose a method of fabricating a liquid crystal display (LCD) device comprising the step of :

- . preparing a substrate (1);
- . patterning a first conductive layer (gate layer 2) and storage electrode layer (12);
- . covering a first layer with a gate insulating layer (3);
- . patterning an amorphous silicon layer (4);
- . forming a contact slit (6) extends through a part of the gate insulating layer as claimed

(see figure 3)

- . patterning a second conducting layer (source 7 and drain 8);
- . patterning a transparent material layer (pixel 9).

It should also be noted that step (e) in the method claims is not clear as stated above; therefore, such step has not been fully either examined on the merit or indicated as allowable subject matter.
